1. During the spring of 1952, at a location between the villages of Kameno (N 42-34, E 27-19), Krustina (N 42-35, E 27-15), and Bulgarevo (N 42-37, E 27-19), all in Burgas Okoliya, two underground rivers were discovered. From here, by means of pipes set two meters in these rivers, water is brought toward Burgas and south of Vetren village (N 42-37, E 27-23), Burgas Okoliya, and carried into the old Burgas reservoir.
2. [] the pipes of the new conduit have a diameter of approximately 40 centimeters. [] at the water outlet there is some sort of a pumping station powered by electricity. 25X1
3. [] not know the capacity of the new water main installation, but since the spring of 1953, when water was regularly brought in to Burgas through these new pipes, the water shortage which previously existed was terminated and there is now an abundance of water which, however, is slightly chalky.¹ 25X1
4. The State Printing Shop is located at present in the arsenal in the Lozenets Quarter of Sofia. All machines are employed for producing cartridges and munitions. The machines of the State Printing Shop, which will allegedly arrive from the USSR, are also to be adapted to this purpose.²

Comments:

25X1

What is probably involved is the conversion of presses for the production of cartridge cases. It is possible to use thus the metal-casting department of a printing shop.
